CONFERENCE & EXPOSITION

Ceramic Membrane Pilot Testing on Lake Michigan

H. Shorney-Darby, G. Galjaard, J. Zheng,

PWN Technologies, The Netherlands

R. Michaelson, P. Aumann

Manitowoc Public Utilities, Wisconsin, USA

America's Authority in Membrane Treatment

American Water Works
Association

Dedicated to the World's Most Important Resource™

acknowledgements

- METAWATER, Japan
- MPU staff
- Rob Kooijman, PWNT
- Harry Scheerman, PWNT

background

- Manitowoc Public Utilities (MPU)
 - two membrane systems
 - 11 mgd cartridge MF
 - 20 mgd submerged MF
 - investigating ceramic membranes for future upgrade

pilot plant

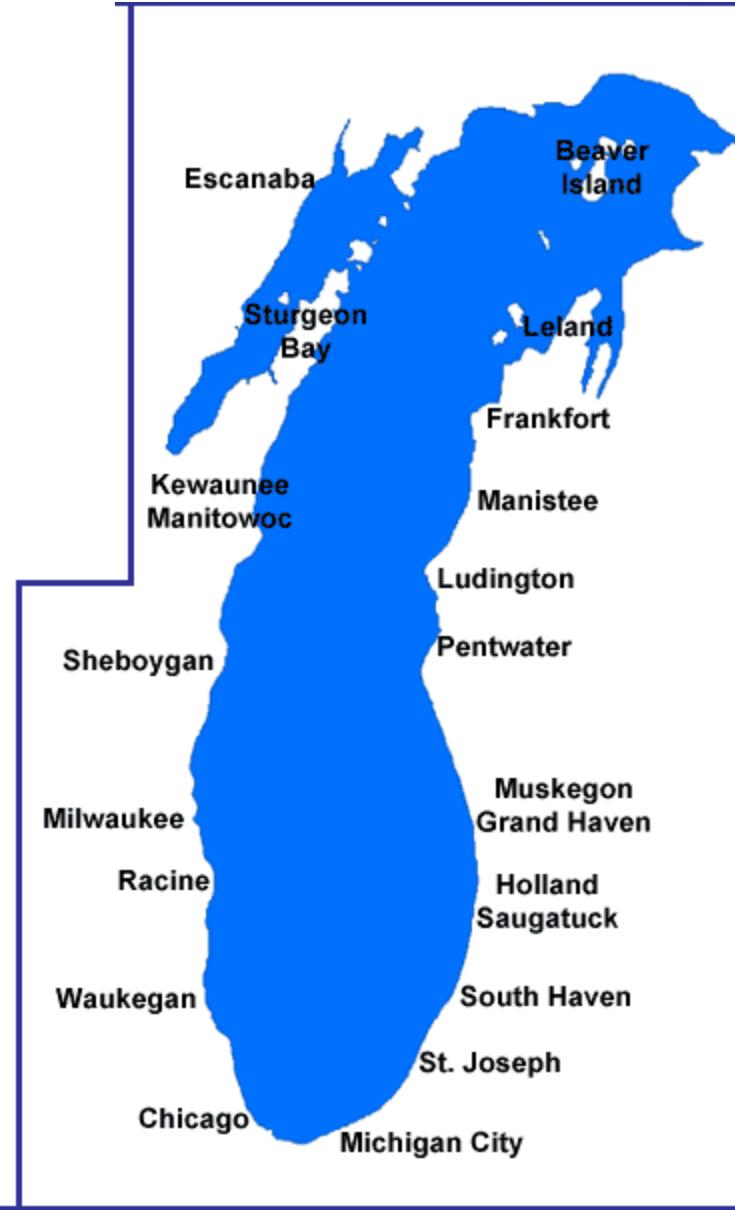

- METAWATER single element pilot
 - pre-sedimentation chamber
 - coagulation/flocculation
 - 25m² ceramic microfilter (0.1 micron)
 - heated CIP
- November 2014 to January 2016
 - critical flux tests (uncoagulated)
 - coagulated trials
 - long-term testing

modular pilot unit

water source

- Lake Michigan
 - low turbidity
 - low DOC
 - low temperature

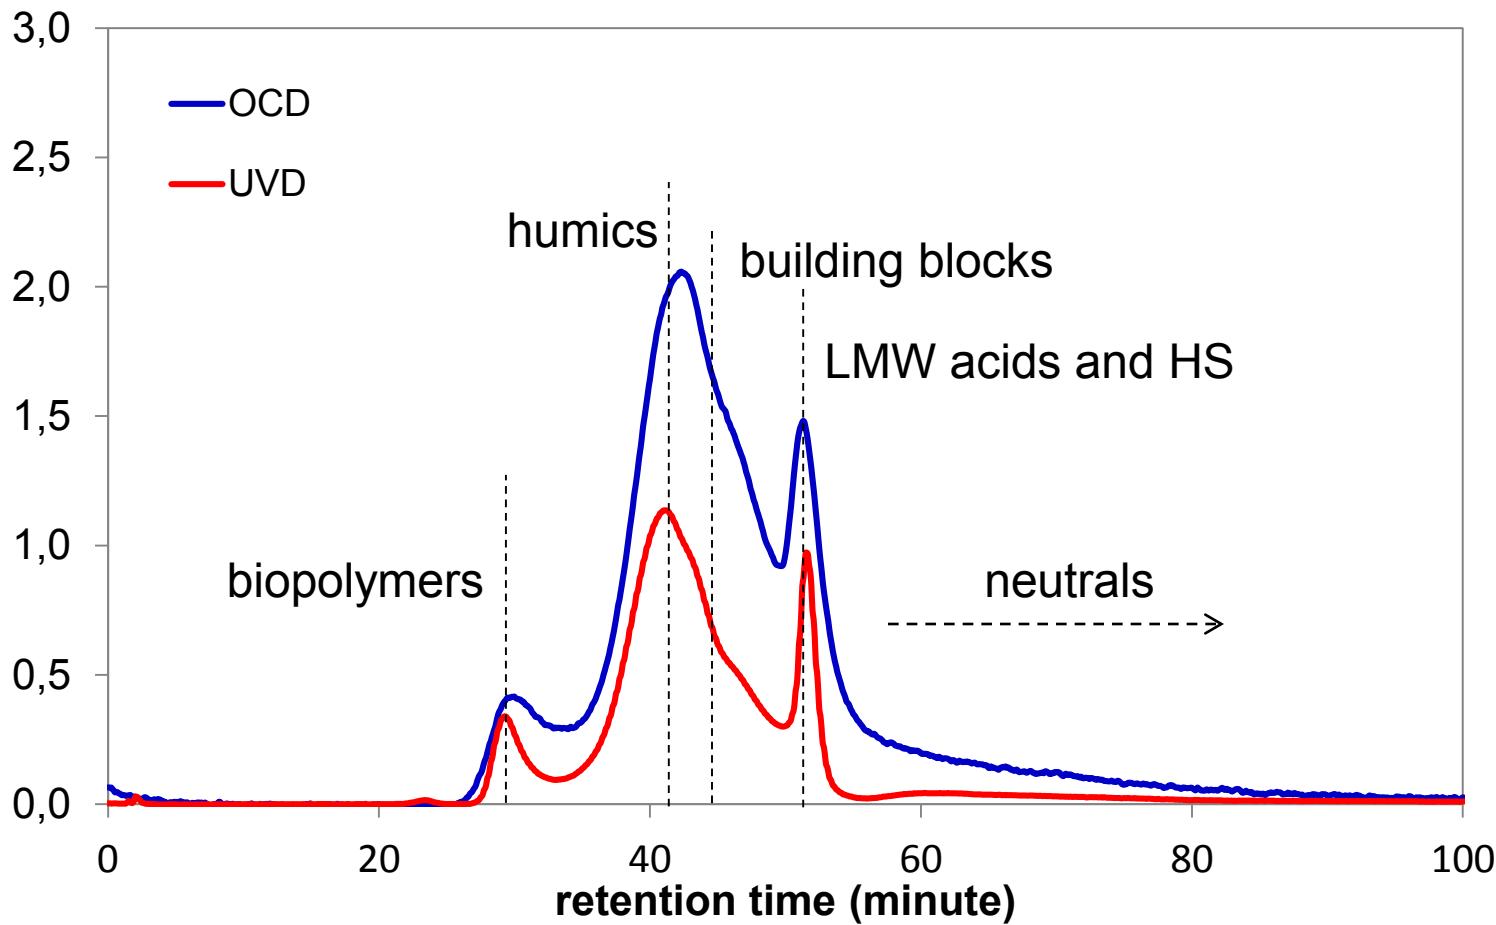

water quality

Parameter	Units	Raw Water	Filtrate
Total aluminum	mg/L	<0.002	<0.002
Dissolved aluminum	mg/L	<0.002	—
Alkalinity	mg/L	102	—
pH	--	8.2	—
turbidity	NTU	<1.0	—
TOC	mg/L	1.87	—
DOC	mg/L	1.74	—
Total iron	mg/L	<0.020	—
Total manganese	mg/L	<0.002	—

Date of sampling: 13-10-2015; Time of sampling: 10:30; Water temperature during sampling: 9.6 Celsius; Pilot coagulant dose: 20 ppm (13.64 ml/min); Pilot flux 175 lmh or 104 gfd; Timing of sample in BW-EBW cycle: 17/8-1

pilot findings

- membrane performance improved with pre-coagulation
- stable operation at 104 gfd (175 lmh)
 - coagulant at 10 mg/L
 - CIP interval >> 45 days
 - BW interval = 22 minutes (testing 40 min)
 - EBWs after 17 BWs (testing 12 BWs)
- in-line coagulation with good mixing and pH 7 for Sumalchlor 50

pilot findings

- EBW with NaOCl at 100 mg/L
- EBW at pH < 3 with H₂SO₄
- avg TMP = 3.6 psi (24.7 kPa) at 10oC
- organics – low, but present as biopolymers and humics which contribute to fouling
